New Developments in Sheet Metal Forming

2018

Published by
Mathias Liewald
Preface

The International Conference “New Developments in Sheet Metal Forming” held in Stuttgart / Germany is organised every second year alternatingly with the International Conference “New Developments in Forging Technology”. Main goal of both conferences is to gather engineers and experts from the industry as well as scientists from universities to discuss the current state of the art, and future tendencies and targets in research and development of new sheet metal and/or bulk metal forming technologies.

Annually, the Institute for Metal Forming Technology (IFU / Stuttgart / Germany) organises this event in collaboration with the Forschungsgesellschaft Umformtechnik mbH (FGU Stuttgart / Germany). For many years, the concept of the conference was to focus on effectively transferring scientific results into value added chains of companies operating in the field of sheet metal forming and other sheet metal forming related market segments. Therefore, the topics of the papers selected to be presented at conference should have reference to current worldwide research activities in sheet metal forming, modern production technologies, tool design in general and new developments in the field of sheet metal material.

During this two-days conference, experts from both universities and industrial companies will present their papers and discuss their newly achieved results with experts from all over the world. Conference topics include investigations performed at several European metal forming institutes, at companies from industry, and at the Institute for Metal Forming Technology (IFU) of the University of Stuttgart. Thus, a balanced mix of practical and theoretical contributions will be presented. In 2018, special attention is paid to present and to publish modern practical solutions in cold forming of sheet metal materials, modern concepts of material compositions, as well as modern sheet metal forming simulation technologies and new approaches in order to integrate modern sensors into the tool structure to control process development during serial production. Furthermore, the technological potential of new material developments e.g. new sheet metal alloys will be disclosed to make attendees able to respond easily to occurring questions of today when running their day to day business in the sheet metal forming industry. Therefore, the opening presentations in particular pay attention to recent questions in metal forming technologies around car body manufacturing and other business as well as future manufacturing strategies!

Also a panel discussion will be held during late afternoon of first conference day. International experts in the field of establishing new startup companies encouraged by academia or business will discuss on chances, opportunities and threats of young entrepreneurs in Israel and Germany.
Company visits offered on Monday, May 14th, 2018 and contributions from numerous international acting market players and different technological research institutions in Germany are objecting and presenting an deep insight into the current developments and research work in the field of sheet metal manufacturing. During the conference, the visitors and speakers are given the opportunity of contributing professionally, analysing and observing trends, exchanging ideas, and cultivating personal networks. Therefore, the conference programme includes visits to industrial companies and a welcoming evening at IFU on the day before conference, the gala dinner on the 1st conference day, and exhibitions of more than 20 companies throughout the entire conference.

I appreciate to thank all authors in advance for contributing and feeling inspired on this conference! I am sure, this book comprising papers presented on May 15th – 16th, 2018 in Fellbach (near Stuttgart) Germany will be dispatched widely and will be available to all international experts involved.

Sincerely yours

Univ.-Prof. Dr.-Ing. Dr. h. c. Mathias Liewald MBA
# Table of Contents

Preface

*M. Liewald*  
V

**International Conference “New Developments in Sheet Metal Forming”**  
May 15th – 16th, 2018

**Strategic Opening Lectures**

Breaking the Habit: From Continuous Improvements Towards Disruptive Technological Changes in the Automotive Industry  
*T. Muhr, S. Buchkremer*  
1

The Present Situation and Future Development Trend of Stamping Die Industry in China  
*X. Yao*  
9

Insights into China’s Economic Development and Implications Out of the 13th 5-Year Guideline  
*S. Müller, S. Pellech*  
23

**Future Component Requirements**

Challenges of Forming Technology in the Context of Alternative Drives and Globalization  
*J. Spindler*  
29

On the Way to Future Mobility – Intelligent Material Mix for e-Mobility  
*K.-H. Füller*  
37

Future Concepts and Flexible Structures for Urban Vehicles  
*G. Kopp, M. Münster, E. Friedrich*  
45

**New Materials in Sheet Metal Forming**

Processing Properties of Thin Dual-Phase Steels for Exposed Body Panels with Reference to DP-K® 290Y490T  
*M. Linnepe, L. Keßler, V. Smukala, J. Schramm, R. Yanik*  
55

Development of Process Techniques for Press Hardening of Thick Plates  
*J. H. de Souza, D. T. de Almeida, H. Mohrbacher, P. Suikkanen*  
65
Local Ductility and Edge Crack Resistivity of Advanced High Strength Steel Grades
S. Westhäuser, M. Schneider, I. A. Denks

smartform® by thyssenkrupp – Enhancement of Production Processes for a Cost Optimized Cold Forming of High Strength Steel
M. Kibben, L. Bode, T. Flehmig, D. Nierhoff, A. Marx

Virtual Technologies
IGA and Forming Processes
F. Dallinger, A. Rémon, M. Feuchter

Laserhub.de – Intelligent Connection of Customers and Manufacturers of Sheet Metal Parts
A. Raidt, C. Rößner

Strategic Opening Lectures
The Rapid Development of Chinese Tooling Enterprises Using the Example of GZ Tooling Group 14 Years Development Process
Z. Wang

Future Individual Mobility Requirements – Production Technology Challenges
C. Juricek

Industrial Working Environment 2025
P. Groche, F. Hoppe, T. Kessler, A. Kleemann

Process Simulation in Sheet Metal Forming
An Optimized and Comprehensive Solution to Support Process and Cost Planning for Stamped Parts
M. Tanveer, D. Marinac, S. Huhn

On the Challenges of Full Field Calibration for Constitutive Models in Sheet Metal Forming
C. Ilg, D. Koch, A. Haufe, M. Liewald

Remove Uncertainty from Try-Out and Enable Virtual Light Room Inspection for Large Flexible Outer Panels, Doors and Closures
D. Lorenz, V. Tunga, A. Caminho, R. Narainen, H. Porzner, M. Biasutti

Advanced Friction Modelling in Sheet Metal Forming Simulation and their Effect on Drawbead Models
C. Bolay, J. Wied, P. Naegele, J. Hol

A Triaxial Failure Diagram to Predict the Forming Limit of 3D Sheet Metal Parts Subjected to Multiaxial Stresses
F. Rastellini
New Developments in Press and Tool Technology

Strategic Orientation of the BMW Group's Press Shops
J. Meinhardt, R. Hummelsberger, K. Grossenbacher, S. Purr
187

Hot Forming of High Strength Aluminium Alloy Materials for BIW Applications; Significance of Adequate Production Equipment and Suitable Aluminium Alloys
195

High Performance Tool Steels for the Direct Hot Stamping Process of 22MnB5
M. Geile, G. Jesner, C. Oberroither
213

Wireless Pressure Monitoring
J. Schäfer
223

Digitalization in Sheet Metal Production

Industry 4.0 in Sheet Metal Production
F. Langer
229

Digitization in the Press Shop
A. Papaioanu
235

Automatic Insertion Height Control on High Precision Stamping Machines
T. Terzyk, B. Tepaß
237

Automated Data Documentation as a Prerequisite for Industry 4.0 Projects in Stamping and Forming Technology
W. Faulhaber, R. Renz
247

New Developments in Current Research

Production of Pressure Vessels
G. Reitter
259
International Conference “New Developments in Hydroforming”
May 15th, 2018

Hydroforming Machines

Quality Monitoring and Predictive Maintenance – Flexible and Efficient Integration of Machine Learning Algorithms in the Production Process
A. Hoffmann, G. Steinhagen, F. Kapp

Forming Simulation Correlation with the Flexform Hydroform Technology
B. Carlsson, M. Bergkvist, R. Andersson, S. Olsson

Application of Multi-Step Tube Hydroforming Technology of Parts with Complex Cross Section
L. Lang, S. Ruan, Z. Hang, Z. Liu, M. Zhang

New Processes and Die Technologies

Extreme Light Weight for Hollow and Flat Products HDF – Technology
J. Hirsch, P. Amborn

New Developments in Sheet Hydroforming
T. Maki, P. Eng

Process Limits During Uniaxial Hydroforming of Cold Extruded Cup-Shaped Semifinished Products
H. Voigts, R. Hild, P. Mattfeld, F. Klocke, T. Bergs

Use of High Strength Tube Materials for Automotive Hydroforming Applications
M. Bistron, T. Säuberlich

New Forming Processes

High Pressure Forming and Injection Moulding in a Single Die:
Hybrid Lightweight Design with Metal- and Reinforced Plastic-Tubes
A. Albert, M. Werner, D. Landgrebe, M. Layer

Short Review of KhAI Investigation Results in Electrohydraulic Forming and Equipment
M. Knyazev

Example of Two Industrial Electro-Hydraulic Forming Applications Highlighting the Advantages of High Strain Rates
E. Cantergiani, G. Avrillaud, J. Deroy, F. Raveleau, G. Mazars
experience the benefits of AIDA Servo Presses

AIDA has been the first company in the world to develop and market direct-drive servo presses, delivering to date over one thousand units worldwide. AIDA Direct Servo Former (DSF) presses are the revolutionary forming systems for the 21st Century. DSF presses are nowadays attracting more and more customers who aim at boosting their productivity and increasing their competitive advantages in the global metalforming industry, while achieving sustainable business development.

GLOBAL TECHNOLOGICAL LEADER IN THE SHEET METAL FORMING

- Direct presence in 35 cities in 19 countries
- A complete range of products, solutions and services for presses from 35 t to 3500 t
- Installations in over 60 countries
- The only global manufacturer of servo presses equipped with proprietary servo motors
