Conference Proceedings of selected papers prepared for the
International Conference on “New Developments in Sheet Metal Forming”
intended to be held in Fellbach, Germany, on May 12th-13th, 2020.
Due to regulations directed by local authorities to avoid further spread of the COVID-19
virus, the organisers of the venue were not allowed to hold this conference in 2020.

All contributions included in this conference proceedings are published as written by
indicated authors. Contents and orthography of contribution do belong into scope of
responsibility of respective author or authors.

ISBN 978-3-947085-03-3
The International Conference “New Developments in Sheet Metal Forming” in Stuttgart / Germany is organized every second year alternating with the International Conference “New Developments in Forging Technology”. Main goal of both conferences is to join engineers and specialists in metal forming technologies from industry and scientists from universities on a common communication platform. Debates and discussions revealing diverging opinions and perspectives on newest trends in metal forming technology, analyses of current state of the art as well as targets to be reached in research and development in the field of sheet metal forming technologies are highly appreciated during both days of this year’s conference.

The Institute for Metal Forming Technology (IFU / Stuttgart / Germany) annually organizes this venue in collaboration with Forschungsgesellschaft Umformtechnik mbH (FGU / Stuttgart / Germany). For many years, the concept of conference has focused on an effective transfer of scientific results into value added chains of producing companies, which are quite active in forging and such dedicated market segments. The presented topics of selected papers of the conference therefore have to be evaluated in the context of current research activities in sheet metal forming, hot forming, and tool design in Europe, the United States, and Asia. Finally, contributions during the conference also intend to present strategic issues of more general topics in production of sheet metal components to external specialists and to figure out the recent state of the art on an international level.

Within the scope of this two-day conference, experts from both universities and industrial companies will present their papers. The topics presented include running investigations and projects being launched in several European and Asian sheet metal forming companies, suppliers of semi-finished products, press machine manufacturers and software vendors addressing their newest achievements. Thus, participants i.e. readers of proceedings respectively, can expect an adequate mix of practical-oriented and theoretical contributions and papers. Stimulated by several contributions supplied by partners of the hosting institute, this year special attention is paid to present and to publish modern practical solutions in sheet metal forming linked with new approaches to integrate sensors into forming equipment such as forming tools or presses in order to control process development during series production. Therefore, one session of the conference is dedicated to the topic “Digitalization in / of Production”.

Preface

Preface

The International Conference “New Developments in Sheet Metal Forming” in Stuttgart / Germany is organized every second year alternating with the International Conference “New Developments in Forging Technology”. Main goal of both conferences is to join engineers and specialists in metal forming technologies from industry and scientists from universities on a common communication platform. Debates and discussions revealing diverging opinions and perspectives on newest trends in metal forming technology, analyses of current state of the art as well as targets to be reached in research and development in the field of sheet metal forming technologies are highly appreciated during both days of this year’s conference.

The Institute for Metal Forming Technology (IFU / Stuttgart / Germany) annually organizes this venue in collaboration with Forschungsgesellschaft Umformtechnik mbH (FGU / Stuttgart / Germany). For many years, the concept of conference has focused on an effective transfer of scientific results into value added chains of producing companies, which are quite active in forging and such dedicated market segments. The presented topics of selected papers of the conference therefore have to be evaluated in the context of current research activities in sheet metal forming, hot forming, and tool design in Europe, the United States, and Asia. Finally, contributions during the conference also intend to present strategic issues of more general topics in production of sheet metal components to external specialists and to figure out the recent state of the art on an international level.

Within the scope of this two-day conference, experts from both universities and industrial companies will present their papers. The topics presented include running investigations and projects being launched in several European and Asian sheet metal forming companies, suppliers of semi-finished products, press machine manufacturers and software vendors addressing their newest achievements. Thus, participants i.e. readers of proceedings respectively, can expect an adequate mix of practical-oriented and theoretical contributions and papers. Stimulated by several contributions supplied by partners of the hosting institute, this year special attention is paid to present and to publish modern practical solutions in sheet metal forming linked with new approaches to integrate sensors into forming equipment such as forming tools or presses in order to control process development during series production. Therefore, one session of the conference is dedicated to the topic “Digitalization in / of Production”.
Hopefully collection of released papers may meet the expectations of our regular guests and conference attendees to take as much as possible into their own day-to-day work. Unfortunately in 2020 it was not allowed to arrange international conferences because of further spread of the virus COVID-19 during spring and summer months, hopefully we will meet again in 2022.

I would like to thank all authors for contributing and feeling inspired to publish this proceedings at least electronically! I am sure that this collection of papers potentially being presented on May 12th-13th, 2020 in the Schwabenlandhalle in Fellbach / Germany will be dispatched widely and will be available to all international experts involved.

Sincerely yours,

Univ.-Prof. Dr.-Ing. Dr. h. c. Mathias Liewald MBA
**Table of Contents**

Preface  
*Prof. Dr.-Ing. Dr. h. c. M. Liewald MBA*  

International Conference “New Developments in Sheet Metal Forming”

1. Strategic Opening Lectures

Smart Press Shop GmbH & Co. KG – efficient, innovative and flexible  
*U. Kreth, H. Rothe – Schuler Group*  

Mobility of the Future: Sustainable, safe, exciting  
*Dr.-Ing. S. Hartung – Robert Bosch GmbH*

2. Sourcing in Asia

Press Dies – Sourcing in Asia  
*A. Lipp – Austermann Process Management Partners*  

Successfully Sourcing Tools in China  
*Dr.-Ing. V. Steininger – Chinese European Tooling Competence AG*  

The Strategic Sourcing and Future Development Trends of Dies for Car Body Manufacturing in China  
*S. You, X. Yang, X. Yuan, N. Hong – Chongqing Ping Wei Auto Science and Technology Co., Ltd.;  
Dr. Zhang – Chongqing Jiepin Technology Co., Ltd.*

The Digital Stamping Process – Bridging the Gap from Component to Car Body  
*R. Schmidt – AutoForm Engineering GmbH*  

DoE-based Tolerance Analysis for Sheet Metal Parts considering Manufacturing Processes  
*H. Zheng, Dr.-Ing. F. Litwa – Mercedes-Benz AG*  

Using FE Process Chain Simulations to improve the Dimensional Accuracy of Car Body Assemblies made of Sheet Metal Components  
*F. Schuler – voestalpine AG;  
Prof. Dr.-Ing. M. Liewald MBA – IFU Universität Stuttgart*
4. Digitalization in/of Production

Process Monitoring and Real Time Algorithmic for Hot Stamping Lines
C. Palm, Dr. R. Vollmer, J. Aspacher – Schuler Pressen GmbH

Data-Driven Tool Wear Classification with a Convolutional Neural Network in Punching Machines
S. Nießner – TRUMPF GmbH + Co. KG;
Prof. Dr.-Ing. M. Liewald MBA – IFU Universität Stuttgart

Digitalization – and then?
T. Schäuble – TRUMPF Werkzeugmaschinen GmbH + Co. KG;
A. Schenek – IFU Universität Stuttgart

Digital Methods for the Development and Maintenance of Forging Machines
N. Trier, S. Neubauer – LASCO Umformtechnik GmbH

5. Future Workplace in Production

Development of a Human-centered Industry 4.0 Philosophy – The Future of Production Work
M. Kandler, Prof. Dr.-Ing. G. Lanza, C. Krahe – wbk Karlsruher Institut für Technologie

6. Material and Material Modelling

On the Numerical Prediction of Properties in the Process Simulation of High Strength Materials
M. Merten, Dr.-Ing. T. Klöppel, Prof. Dr.-Ing. A. Haufe – DYNAmore GmbH

Challenges in the simulative Consideration of the Aluminium Hardening induced by the KTL Furnace
Dr. D. Koch, Prof. Dr. A. Haufe – DYNAmore GmbH – Material Competence Center;
Dr. C. Wilking, C. Liebold – DYNAmore GmbH;
Dr. M. Feucht, Dr. S. Roller – Mercedes-Benz AG

7. Young Researchers Elevator Pitches

Increase of Cutting Surface Quality by geometrical Modification of the Punch Nose Radius
S. Senn, Prof. Dr.-Ing. M. Liewald MBA – IFU Universität Stuttgart

Process Design for the Forming of Hat Shaped Sheet Metal Parts with Alternating Blank Draw-in
R. Radonjic, Prof. Dr.-Ing. M. Liewald MBA – IFU Universität Stuttgart

Digital Process Planning for the Production of Sheet Metal Components as Prototypes and small Series with Stretch Forming and incremental Sheet Metal Forming
R. Schmitz, Dr.-Ing. D. Bailly, Prof. Dr.-Ing. G. Hirt – IBF RWTH Aachen University

MN Coil Servicecenter GmbH – Innovative HSC Manufacturing Process Reduces Edge Crack Sensitivity of Blanks and Enables New Sheet Metal Component Spectra
synchropress GmbH – synchropress®: the next Level

International Conference “New Developments in Hydroforming”

1. Opening Lectures Hydroforming

CAE-based Optimization of Tube Hydroforming Processes – Balancing Quality and Cost Criteria
G. Moncelsi, L. Krauss – AutoForm Engineering GmbH

2. New Processes in Hydroforming

Some Ideas for the further Development of Hydroforming Process Chains
Prof. Dr.-Ing. W. Homberg – LUF Paderborn
Geometry Calibration of Ultra High Strength Steel Parts at Room Temperature using High pulsed Power Processes
Dr. G. Avrillaud – BMAX; G. Brund – ArcelorMittal

3. Hot Forming of Tubes

Development of a new Tool for Tube Hydroforming using Induction Heating
D. Wohlfarth, Prof. Dr.-Ing. M. Liewald MBA – IFU Universität Stuttgart

Integrated Process and Equipment of Double-sided Pressure Hydroforming for Large-sized Al-alloy Shells
Prof. PhD W. Liu, Prof. PhD S. Yuan – Harbin Institute of Technology

AutoForm Software Solutions for Sheet Metal Forming

AutoForm is your trustable partner for the digital transformation of your engineering and manufacturing processes in sheet metal forming.

Our portfolio of software products enables you to address complex issues that arise in practice and to achieve a new level of competitiveness in various industries.

MN Coil Servicecenter is the market-leading supplier of customized 2D precision aluminum blanks for the mobility industry. We stand for a modern and highly automated production. Our patented HSC cutting process (EP 2886231 B1) guarantees highest surface quality, first-class design of the blank edge and the best possible forming result with optimized material usage. We are DIN EN ISO 9001:2015 and IATF 16949 certified and registered with Achilles Automotive. Get in touch with us – we look forward to your inquiry.

Wir sind ein junges Unternehmen und Zulieferer der Automobilindustrie. Unsere Dienstleistungen umfassen die Bereiche:

- Methodenplanung
- Wirkflächen-Erstellung
- NC Programmierung
- Tiefziehsimulation
- Prüfvorrichtungen und Lehren
- Bombierung
